

PROJECT_PLAN

Project Overview

This project is an MVP SaaS platform for Algerian e-commerce sellers.

The inspiration for the platform is shown in the attached screenshots PDF. The screenshots are only for understanding the workflow and UI ideas.

The goal is NOT to clone the entire platform shown in the screenshots.

The goal is to build the smallest usable MVP that allows sellers to:

- Create an account
- Create a store
- Add products
- Generate product landing pages
- Receive orders
- Manage orders

The stack is:

- React (JavaScript)
- Tailwind CSS
- React Router
- Supabase Auth
- Supabase Database
- Supabase Storage
- Vercel Hosting

Development Rules

1. Build one phase at a time.
 2. Do not implement future phases before the current phase is complete.
 3. After each phase, explain:
 4. What was implemented
 5. What files were created
 6. What needs to be tested
 7. Keep code simple and maintainable.
 8. Do not add unnecessary libraries.
 9. Mobile responsiveness is required.
 10. Focus on functionality first, design second.
-

MVP Features

Authentication

Users can:

- Register
- Login
- Logout

Protected routes must be implemented.

Store Management

Each user owns one store.

Store fields:

- Name
 - Slug
 - Logo (optional)
-

Product Management

Users can:

- Create product
- Edit product
- Delete product
- Upload product image

Product fields:

- Name
 - Price
 - Description
 - Image
-

Product Landing Pages

Each product has a public landing page.

Example:

stoStore:

storename.matjari.com

Product:

storename.matjari.com/product-slug

Landing page contains:

- Product image
- Product title
- Product description
- Product price
- Order form

Only one landing page template is needed for MVP.

No page builder.

No drag and drop but can change the order of the elements.

Orders

Customers can submit:

- Name
- Phone
- Wilaya
- Address

Orders are stored in Supabase.

Order Management

Seller can:

- View orders
- Filter orders
- Change order status

Statuses:

- New
 - Confirmed
 - Shipped
 - Delivered
 - Cancelled
-

Dashboard

Simple dashboard only.

Show:

- Total Orders
- New Orders
- Delivered Orders

No analytics charts.

Settings

Store settings:

- Store Name
 - Logo
 - Store subdomain
-

Features Explicitly Excluded From MVP

Do NOT build any of the following:

- Custom domains
- Analytics
- Multiple stores per user
- Inventory management
- Delivery company integrations
- Coupons
- Marketing tools
- Email automation
- AI features
- Multiple landing page templates
- Drag and drop page builder
- Team members
- Advanced reporting

These features may be added after launch.

Database Design

stores

- id

- user_id
- name
- slug
- logo_url
- created_at

products

- id
- store_id
- name
- price
- description
- image_url
- slug
- created_at

orders

- id
- product_id
- customer_name
- phone
- wilaya
- address
- status
- created_at

we will see if we will need anything else

Development Phases

we will make it functionality one by one

Success Criteria

The MVP is considered complete when:

1. A seller can create an account.
2. A seller can create a store.
3. A seller can add a product.
4. A customer can open a product page.
5. A customer can place an order.
6. The seller can see and manage the order.

Everything else is optional after launch.

Instructions For Codex

- Read this document and the attached screenshots.
- Build one feature at a time.
- After each feature, explain what was implemented.
- Do not implement features outside the MVP scope unless explicitly requested.
- Prefer simple solutions over complex ones.
